Performance graph

The table above presents returns for different time horizons up to 30 September 2026. All calculations are based on nominal total returns wit reinvestment of dividends. Returns are compounded and denominated in local currency and based on the closing price of each day. Inception date is the start date of Warehouses De Pauw, which is 6/30/99. Volatility is calculated as the 5-year annualized standard deviation of monthly returns. The Sharpe ratio is calculated with the 5-year annualized return, the volatility and the 1-month Euribor.
